

GIT - COLLABORATE IN PROJECT USING GITHUB

- **Git basic cammands**

1. git init
2. git clone https://www.example.com/repositoryname
3. git add .
4. git commit -m "first-commit"
5. git push origin main
6. git branch <branch_name>
7. git checkout <branch_Name>

1. Create a feature branch:

git checkout -b feature/login → create branch switch to the branch

Push it:

git push origin feature/login → Push the data to the branch

1. Go to GitLab → Your project → **Merge Requests** → **New Merge Request**
2. **Choose:**
 - Source branch: feature/login
 - Target branch: main (or develop)
3. Review changes and click "**Create Merge Request**"
4. After review, click "**Merge**"

Q1. How to Resolve Merge Conflicts in Git (OR)

Q2. What is a Merge Conflict?

- Occurs when **two branches** modify the same line in a file or when **one branch** deletes a file that **another branch** edits.

Steps: 1. Manually edit the file and keep the correct code

2. Mark the file as resolved:
 - ✓ **git add**
3. Continue the merge:
 - ✓ **git commit**
4. Push the changes:
 - ✓ **git push origin main**

❖ What is the difference between GitLab CE and GitLab EE?

Feature	GitLab CE (Community Edition)	GitLab EE (Enterprise Edition)
License	Open-source (MIT license)	Paid, proprietary license
Features	Basic Git repository and CI/CD	advanced security, performance, and team management features
